INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/EP2004/004047

_	Box No. I Basis of the report
1	. With regard to the language, this report is based on the international application in the language in which it was filed, unless otherwise indicated under this item.
	 □ This report is based on translations from the original language into the following language, which is the language of a translation furnished for the purposes of: □ international search (under Rules 12.3 and 23.1(b)) □ publication of the international application (under Rules 12.4) □ international preliminary examination (under Rules 55.2 and/or 55.2)
2.	With regard to the elements* of the international application, this report is based on (replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report):
	Description, Pages
	1-8 as originally filed
	Claims, Numbers
	1-15 as originally filed
	a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing
3.	 ☐ The amendments have resulted in the cancellation of: ☐ the description, pages ☐ the claims, Nos. ☐ the drawings, sheets/figs ☐ the sequence listing (specify): ☐ any table(s) related to sequence listing (specify):
4. [} \$	had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)). the description, pages the claims, Nos. the drawings, sheets/figs the sequence listing (specify): any table(s) related to sequence listing (specify):

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/EP2004/004047

Re Item V.

D1: WO-A-99/19289

The present application is directed to a process for the separation of palladium from solvent-free at room temperature solid crude reaction mixtures comprising aryl acetic acids, which crude mixture is obtained by palladium catalysed carbonylation, by absorption of the palladium on solid adsorbents, characterized in that the adsorption is carried out in the absence of a reducing agent for palladium and at a temperature, where the crude reaction mixture is molten.

Document D1, which is considered to represent the most relevant state of the art, differs from the matter of claim 1 insofar, that the recovery of the catalyst is not performed solvent-free by melting the crude reaction mixture, but by converting the crude product to the sodium salt by the addition of aqueous NaOH solution upon which a two phase system is formed. The organic phase containing the catalyst is recycled to the carbonylation reactor.

The problem to be solved by the present invention may be regarded as the provision of an improved process for the preparation of aryl acetic acids. The solution is given in claim 1 and concerns the adsorption of the palladium on a solid adsorbent added to the molten crude reaction mixture. This separation protocol is, however, not deducible for the skilled person in the art from D1.

Thus, the subject matter of claim 1-15 fulfills the criteria of Article 33(2) and (3) PCT with respect to the available prior art.
